

[illegible]

Diagram illustrating a cross-section of a building facade, showing a vertical wall and a window. The wall is composed of several layers, including a thick grey outer layer, a thin black layer, a thin white layer, and a thick grey inner layer. The window is shown on the right, with a thick grey frame and a thin black inner pane. The diagram is labeled with dimensions and material properties.

Technical cross-section diagram of a roof edge detail. The diagram shows a sloped roof structure with a parapet wall on the left and a vertical wall on the right. The roof is covered with a grey layer, and the parapet wall is also grey. A yellow hatched area represents insulation. A pink hatched area represents a vertical layer, possibly a membrane or insulation. A white curved pipe or duct is shown on the right side. Labels with leader lines point to various components:
